# **Forward**

Missouri's minerals production, coal, granite and shale showed some decreases for 1988. Clay, copper, iron, lead, silica sand and zinc showed an increase for 1988.

It is our privilege to report, like 1986 and 1987, there were no fatalities in Missouri Mines as inspected by this Division in 1988. This makes three (3) years of mining without a fatality.

Our Mine Safety Training Section trained 3,186 miners in 1988. We are still operating the program with two and one-half instructors. We are still active in Mine Rescue Training also.

Missouri's mine safety records reflexes the on-going practice of good safety habits in the mining industry.

The Division of Labor Standards is happy to see the continuing cooperation among all the people involved in the safety & health training and awareness programs.
